

■ EUROPE MAKINE

Turnkey car wash

We build it, you run it

We secure the site, obtain the permits, install the machines, and hire and train your crew, so you take over an operation that is already running.

Production facility

What we do and what you do

Europe Makine carries the site, the permits, the machines and the crew. You take over the finished business and run it.

Site and property

We identify and secure a move-in-ready commercial site through our own network, so you are not running a property search on your own.

Installation

Machines from our own range are built in our facility, shipped, installed and calibrated on site.

Training

Your crew trains on the equipment and the daily operation until every wash is running to standard.

Permits

We work through the municipal zoning, building and operating permits for the site before it changes hands.

Staffing

We interview and hire the floor operators and management who will run your wash.

Handover

You take the keys to a facility that is already open and washing cars, not a construction site.

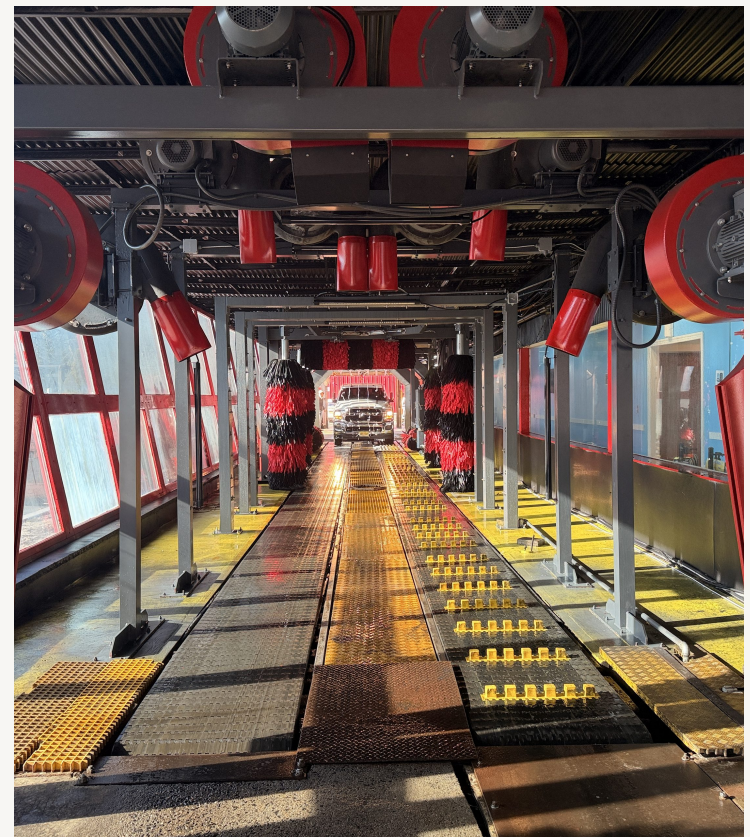

Scope as published by Europe Makine on the We build it, you run it page at europemakine.com. Site availability, permit conditions and staffing are confirmed per project.

What you bring

Capital and the intent to operate the business.

What you take over

A wash that is already open, with its membership programme, payments and daily reporting configured and running.

A Europe Makine conveyor tunnel in service. Wrap brushes, side and overhead blowers, and the conveyor track with its guide rollers.

What can go in the building

Six machines, all built in our own facility: touchless and brush rollovers for a single bay, a modular conveyor tunnel, and full-height gantries for trucks and buses. The building is specified around the system you choose.

System	Published capacity	Maximum height	Maximum width	Plant or system length
Acrobat 2X, touchless rollover	3 – 5 vehicle/min	2.20 m	2.20 m	6.5 – 15 m
Ephesus, three-brush rollover	2 – 2.5 min/vehicle	300 cm	220 cm	10 m rail
Cirrus 5N, five-brush rollover	24 – 32 vehicles/hour	2.50 m (3.00 optional)	2.20 m	Not published
Conveyor tunnel	30 – 60 vehicles/hour	250 cm	220 cm	9 – 30 m
SUNRISE W4000, truck and bus	5 – 6 min/vehicle	420 cm	285 cm	Not published
SUNRISE W4700, truck and bus	7 / 14 min/vehicle	470 cm	285 cm	Not published

What we need to know to specify a system

The site dimensions, including the length available for a queue. The vehicles per day at peak and the hours you trade. Whether the wash is attended or unattended. The water supply, drainage and electrical capacity on site.

Figures as published by Europe Makine on the product pages at europemakine.com. Rollover and gantry heights and widths are maximum washing height and width; conveyor tunnel figures are maximum vehicle height and width. Units are printed as published and are not converted. No plant length is published for the Cirrus 5N or the SUNRISE models.

Supplied with every machine

Door to door shipping, installation, and six months warranty, as published with the machine. Rollovers wash in a single bay with the vehicle standing still. The conveyor tunnel moves the vehicle and needs the length in the table above.

What is already running

Ali's Car Wash, Ocala, Florida

Ali's Car Wash is one real, single location car wash that we built, installed and operate ourselves, using the process on this sheet. It is open to the public today.

Europe Makine and Ali's Car Wash share a single contact address. It is the same team that manufactures the machines, running one of its own washes day to day, not a licensee and not a reseller.

Site	Ali's Car Wash
Address	3821 SW College Rd, Ocala, FL 34474
Hours, as published	9 AM to 9 PM
Operated by	Europe Makine
Sold as	Single washes and monthly membership

Ocala details as published by Europe Makine. Hours are printed as published, with no day range given.

Installed in Florida

A Europe Makine tunnel car wash site: the building, the entrance arch and the pay station.

A lit Europe Makine tunnel entrance at a car wash in Florida at night.

We build it, you run it

Europe Makine

Europe Makine builds car wash, truck and bus wash systems and installs them in the United States from its Florida base. The machines are built in our own 1,500 m² facility and exported to Germany, Poland, Italy, Romania, Azerbaijan, the UAE and other markets.

We build the machines

Car, truck, bus and rail wash systems, built to the published specification.

We build and staff the site

Site, permits, installation, hiring and training, carried through to a wash that is already open.

We ship, install and warrant

Door to door shipping and installation are supplied with the machine, with six months warranty.

The next step is a proforma

Tell us the market you have in mind and the throughput you want to run. We will come back with a proforma quotation. There is no charge for it.
